

LEADING THE WAY IN LOGISTICS AND SUPPLY CHAIN CONSULTANCY

An introduction to Langebæk.

DRIVING SUCCESS IN SCANDINAVIAN LOGISTICS

Langebæk is a leading company in Scandinavia for supply chain management, logistics optimization, and warehousing. With offices in Denmark, Sweden, and Norway, we offer consulting services at the strategic and operational levels based on data, research, and thoroughly tested procedures. We also uphold the tenets of professionalism, integrity, accountability, ambition, and seeking exceptionality. We have collaborated with the largest businesses in northern Europe for more than 45 years, and we have produced results for each and every one of them.

OUR AREAS OF EXPERTISE

Strategy

Achieve competitiveness, efficiency, adaptability, and sustainability with our early involvement in your strategic processes and dedicated support throughout your strategic transition.

Logistics

Partner with us as expert logistic consultants, whether it's in your warehouse or factory, to create unique and competitive logistics solutions tailored to your business.

Supply Chain Management

Navigate the global supply chain with confidence. Our expertise in understanding intercompany flows and

processes empowers you to build a strong and resilient supply chain.

Technology

Stay at the forefront of modern and efficient logistics by leveraging our in-depth knowledge and experience with robotics, material handling systems, and IT solutions.

Project Execution

Experience seamless implementation of comprehensive logistics solutions. We oversee the entire process, ensuring a holistic approach and hands-on management for successful execution.

- 1977 — Established by Torsten Langebæk

BALANCED LOGISTICS

At Langebæk, we have always prioritized finding the right cost profile for logistics. However, as the world becomes increasingly complex, we have recognized the need for a nuanced approach – that's where Balanced Logistics comes into play.

For example, if your goal is business growth, it requires adequate preparation. You must consider where you are growing and avoid compromising flexibility by solely optimizing costs. Building a warehouse that is too small, for instance, would hinder your growth potential. The same principle applies to your service level ambitions. While we can optimize your costs, it's essential to consider your sustainability targets. Each parameter influences others, and by understanding the implications, we can make informed decisions.

With Balanced Logistics, we adopt a holistic approach, considering the entire picture. Drawing upon the

expertise of Scandinavia's most experienced supply chain and logistics team, we offer comprehensive insights and an overarching perspective. We can help you strike the right balance, ensuring an efficient and optimal supply chain.

Watch a video about our long collaboration with Netto

REVOLUTIONISING NETTO'S PACKAGING OPERATIONS

At Netto's main distribution center in Køge, Denmark, we have recently been involved in implementing a new fully automated mixed-case-palletising solution capable of handling 3,600 cases per hour for more than 1,200 SKUs. Advanced automation technologies play a central role in the cutting-edge Vanderlande system, which includes six robot cells capable of building store-friendly, mixed-case pallets. Each robot can deal with 600 cases an hour and operate 20 hours a day, five days per week. Together they can build over 40 pallets per hour to service more than 280 daily deliveries.

With over 30 years of collaboration and more than 30 projects, Netto stands as one of Langebæk's oldest and closest clients. A key factor contributing to this strong relationship is a shared focus on maintaining a lean organization. In recent years, Netto has experienced significant growth and transitioned from a hard-discount to a soft-discount model, presenting various challenges.

One such challenge was the main distribution center nearing maximum capacity for the grocery assortment. To address their future needs, the Danish discount food retailer made the decision to invest in new logistics automation, with Langebæk as their trusted consultant.

The result is now one of the country's most advanced and automated packaging facilities. Twelve robots efficiently pick, move, and pack boxes onto pallets with high speed and precision. The facility incorporates cutting-edge technology, enabling the handling of heavy boxes with diverse shapes and sizes.

Through extensive project planning and exploration of the latest technological advancements, it was discovered that there was potential for this high level automation. Due to a highly experienced project team from Netto, Vanderlande and Langebæk the project turned out very successful.

DRIVING SUSTAINABLE CHANGE

Sustainability is more than just words at Langebæk; it is about driving tangible actions that have a genuine impact. Our sustainability strategy is built on the three ESG pillars: environmental, social, and governance. This all-encompassing approach is the foundation of our mission to foster long-term change in collaboration with our clients. Our path to sustainable transformation includes a pledge to join the UN Global Compact, demonstrating our commitment to purposeful action and the pursuit of global goals.

As a consultancy, we are unwavering in our commitment to reducing environmental impact. We diligently reduce resource consumption in the service sector, and our unwavering efforts to monitor and improve our carbon footprint demonstrate our steadfast commitment. We forge connections with our clients based on shared ambitions by embracing the United Nations' Sustainable Development Goals (SDGs). We expertly combine our knowledge with these goals, tailoring solutions to their specific requirements. While our alignment with the SDGs is clear, our capabilities extend beyond their scope,

allowing us to meet a wide range of business objectives.

Customised solutions for impact

We harness our competencies to address clients' challenges effectively. Our offerings encompass solutions within:

- **Carbon footprint:** We deliver reduced carbon footprints and potential cost savings through micro-level optimisations to macro-level distribution enhancements.
- **Waste handling:** Pioneering waste solutions that integrate secondary material flows, thereby advancing circular economy efforts.
- **Ergonomics:** As we drive automation, we ensure that operational changes are seamlessly integrated to ensure employee health and safety.
- **Analysis, measures, and recommendations:** We examine previous initiatives to fine-tune strategies for maximum impact, and we align logistical projects with sustainability goals before executing them.

Langebæk specialises in healthcare logistics, recognising the intricate nature of logistics daily operations. The successful functioning of a hospital depends on the seamless alignment of multiple flows, including patients, medicine, sterilised equipment, waste management, and more.

Our expertise lies in optimising existing processes and facilitating the design and commissioning of new facilities to ensure reliable and efficient solutions.

Our mission in healthcare logistics is dedicated to serving customers within the public sector, providing them with top-notch operational logistics and process optimisation solutions. We achieve this through the optimisation, development, and implementation of relevant processes and logistics solutions in the entire supply chain. Drawing from the latest knowledge, inspiration, and experiences gained from similar projects in various regions, municipalities, and hospitals, we strive to create innovative, reliable, and sustainable solutions that promote operational reliability and efficiency for the

public sector, ultimately benefiting patients and citizens. Logistics plays a critical role in every aspect of modern logistics daily operations, and at Langebæk, we excel in optimising processes for a broad range of flows, including patients, beds, assistive aids, consumer goods, sterile items, medicine, uniforms, linen, implants, food, and waste. By ensuring smooth logistics management, we contribute to the seamless functioning of healthcare facilities, delivering value to both medical institutions and the people they serve.
