PORT OF KALAJOKI

PORT OF KALAJOKI – accessible, flexible and sustainability at your service

Whether your cargo is headed to the Bothnian Bay or further across the world – operate with the Port of Kalajoki

A logistically smart location for your business

Well positioned. Ready for growth.

WATCH THE VIDEO

Port of Kalajoki is in a central spot on the coast of the Gulf of Bothnia, with excellent transport connections. Highways 8 and 27 provide efficient access to different parts of Finland and ensure smooth passage for special transports.

The port has space to grow – new berths and material handling equipment enable diverse cargo operations. Cranes and operator machinery are suitable for a wide range of goods, from bulk materials to project cargo.

Port of Kalajoki serves its customers flexibly and cost-effectively – precisely according to your needs. We have the resources to handle increasing cargo volumes, now and in the future.

The Port of Kalajoki Business Park

Built for business – ready for growth

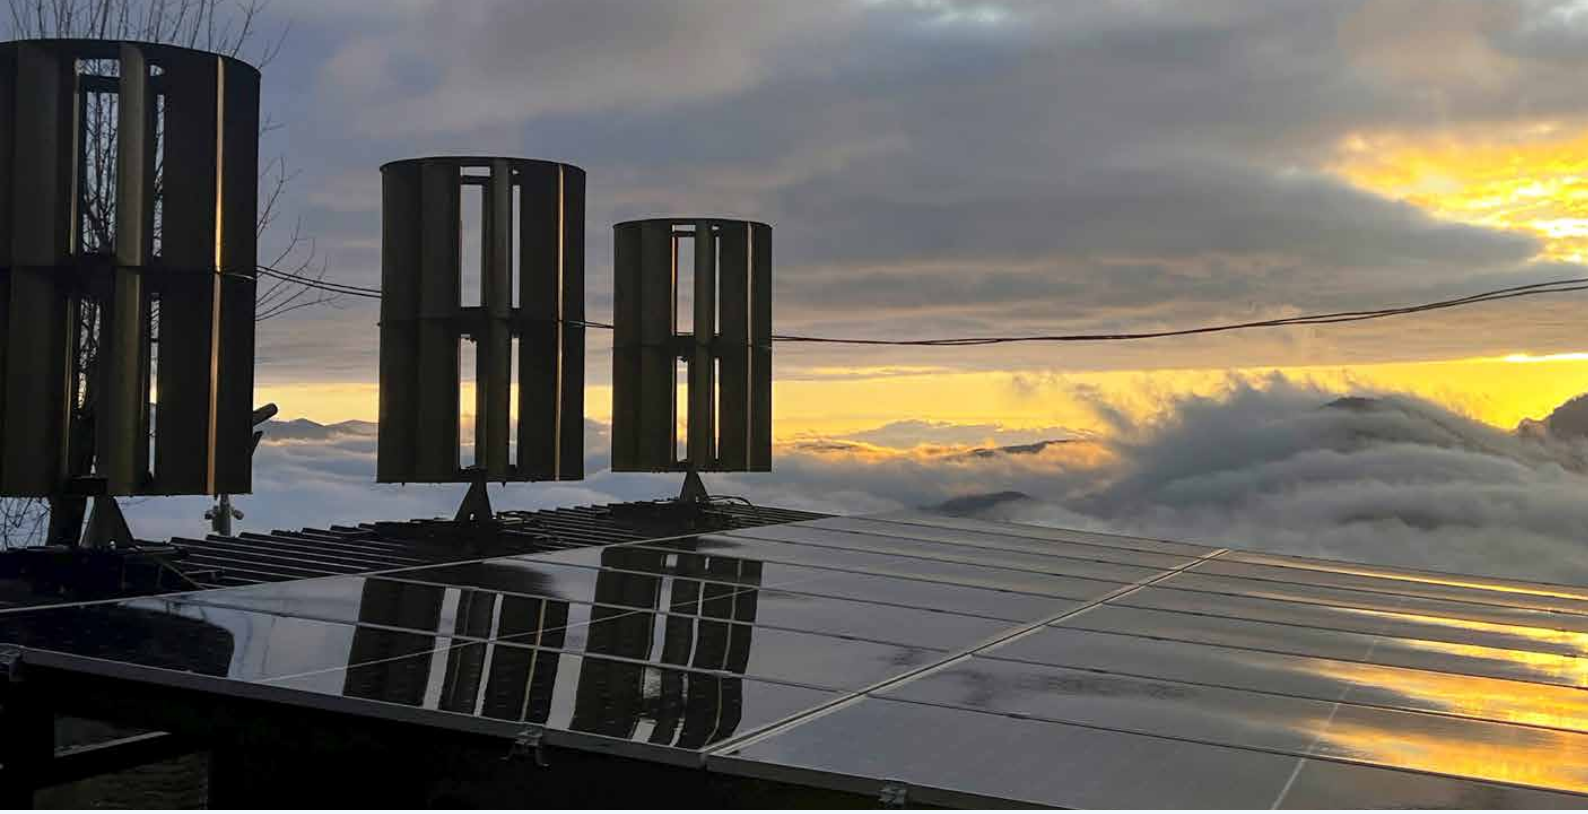

The Port of Kalajoki Business Park is located next to the free trade port in a logistically excellent location. The area offers direct access to Highways 8 and 27, ensuring smooth domestic traffic and efficient passage for special transport.

The business park is already home to 15 companies that benefit from each other's services, creating an efficient local value chain. The proximity to the port offers a significant advantage, especially for logistics and export-oriented businesses.

There is plenty of plot space – tens of hectares are ready for development, with more under planning. Plots can be tailored to meet business needs, and the City of Kalajoki supports companies in settling in by offering help with plot selection, networking, financing, and energy solutions.

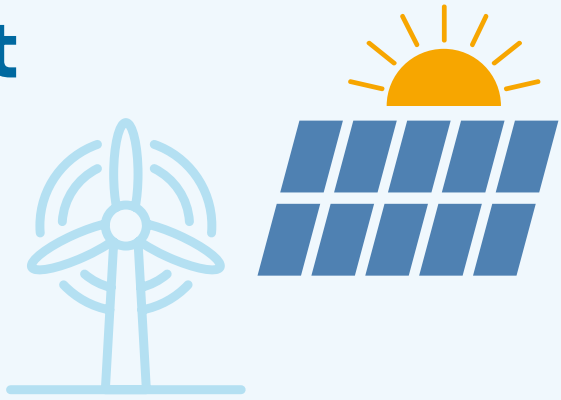

All energy solutions are designed sustainably and with respect for the environment.

Clean energy project

Energy powered by new technology

Port of Kalajoki is building its own energy production system. The system, consisting of solar panels and wind turbines, will supply nearly 70 percent of the port's annual electricity needs. It will also include an energy storage unit to balance consumption peaks and ensure reliability during outages.
The system, which utilizes next-generation wind power technology, is the first of its kind in Finland.

The project is partially funded by Business Finland, which supports clean transition energy projects that incorporate new technologies.

Port of Kalajoki's energy system utilizing innovative wind power technology is the first of its kind in Finland.

A port committed to responsibility

Sustainability is the way forward

Port of Kalajoki is firmly committed to sustainable development across environmental, economic, and social dimensions. Both customers and stakeholders recognize and value the port's responsible operating principles. At Kalajoki, we believe that long-term economic success is built on sustainable choices.

Responsibility is embedded in all aspects of our operations. Every activity is planned with environmental considerations at the forefront. Our ISO 14001 environmental certification and ISO 9001 quality management system guide us in continuous improvement and responsible management.

Port of Kalajoki demonstrates how industrial operations and the natural environment can coexist — through deliberate decisions and forward-thinking solutions.
