Who is NordRen?

NordRen AS is Norway's leading provider of household waste collection and waste logistics. Every day, we deliver essential public services on behalf of municipalities and inter-municipal companies. We ensure that more than one million residents have access to reliable, safe and efficient waste collection services.

Our work is part of society's essential infrastructure. When waste is collected at the right time, in the right way and to a consistently high standard, everyday life works as it should — for residents, local communities and our clients: the municipalities.

The combination of skilled employees, operational experience, local knowledge, efficient logistics solutions and modern, environmentally friendly vehicles helps ensure that we remain competitive — today and in the future.

We aim to be a partner that municipalities can rely on. That is why we work systematically with quality, the environment, safety and continuous improvement throughout our operations. NordRen is certified to ISO 9001, ISO 14001 and ISO 45001.

NordRen AS is part of Verdis Nordic AS, a leading Nordic waste management platform operating in Norway, Sweden, Denmark and Finland. As part of this group, we belong to a wider professional community working to provide efficient, forward-looking and sustainable waste collection services across the Nordic region — “proud working for a cleaner society!”

«NordRen's strength lies in its people and the team. A professional community whose expertise, experience and commitment enable us to carry out an important public service.»

We are on the road every day, in all conditions, working in service of the environment. The contribution made by our waste collectors is invaluable in helping to achieve the authorities' targets for higher recycling rates — and, with that, a cleaner and more sustainable society.»

Finn Lodsby / CEO

Logistics That Must Work — Every Day

Reaching the bin is more complex and demanding than you might think. The service has to be delivered every day, all year round. Challenging and sometimes almost impassable roads have to be navigated in all kinds of weather and road conditions.

This places considerable demands on both people and machinery. The physical fitness of our waste collectors and their skills as professional truck drivers are essential. But the job also depends on precise planning, strong management and robust contingency arrangements — at all times.

Our services are tailored to municipal needs, local conditions and environmental requirements. For residents, the service should feel simple and predictable. For municipalities, we aim to be a reliable,

cost-effective and professional partner.

Good waste collection starts with good logistics. Route planning, correctly specified vehicles, HSE, the handling of service deviations, documentation and dialogue with the client are all closely connected. When an assignment is planned properly, unnecessary driving is reduced, resources are used more effectively and the service becomes more efficient.

Our waste collectors work in local communities every day. They know the routes, the traffic, local variations and the practical challenges that need to be solved along the way. Few transport tasks place greater demands on a driver than household waste collection.

Expertise, local knowledge and vigilance form the basis for the quality that residents, our clients and we ourselves expect.

The Value Chain Starts With The Resident:

When every part of the chain works, waste collection contributes to more than tidy streets and emptied bins. It creates the foundation for better use of resources and a more circular economy.

DIN LANGSIKTIGE PARTNER

I MER ENN 60 ÅR HAR VI LEVERT UTSTYR TIL
RENOVASJONS- OG GJENVINNINGSBRANSJEN.

kvalitet, dedikasjon, og kontinuerlig forbedring

Vår suksess er bygget på en kombinasjon av kvalitet, dedikasjon, og kontinuerlig forbedring, noe som har gjort oss til en pålitelig og langsiktig partner for våre kunder. Vi takker for tilliten og ser frem til et fortsatt godt samarbeid. Besøk oss gjerne for å lære mer om våre tjenester og produkter, og hvordan vi kan hjelpe din virksomhet med å nå sine mål.

RICH.STEEN®
DIN LANGSIKTIGE PARTNER

TJENESTER OG VERDIER

SATSING PÅ KVALITET OG INNOVASJON

Markedsledende Leverandør og Langsiktig Partner

Vi ser på oss selv som mer enn bare en leverandør; vi er en langsiktig partner som våre kunder kan stole på. Sammen med våre kunder jobber vi for å skape bærekraftige og fremtidsrettede løsninger.

Verksted og Delelager i Oslo

Med vårt moderne verksted og godt utstyrte delelager i Oslo, kan vi tilby raske og effektive reparasjoner og vedlikehold.

Service

Våre medarbeidere er hjertet i vår virksomhet. Med et team av høyt kvalifiserte og dedikerte fagfolk, sikrer vi at alle våre prosjekter blir gjennomført med nøyaktighet og profesjonalitet.

Reisende Serviceteknikere

Vårt team av reisende serviceteknikere står klare til å yte assistanse der det trengs. Uansett hvor våre kunder befinner seg, kan de regne med rask og pålitelig service.

Miljø

Utviklingen går raskt fremover, og sammen med leverandørene kan vi bistå kundene i overgangen til renere, og støyreduisert drift.

Fokus på opplæring

Vi tror sterkt på verdien av opplæring og kompetanseheving. Gjennom vårt omfattende opplæringsprogram, sikrer vi at våre ansatte alltid er godt rustet til å håndtere de utfordringene de møter.

The People Behind The Service

Behind every vehicle, every route and every collection are people making sure that an essential service is delivered.

Our waste collectors are on the front line of NordRen's operations. They work out in the streets, in traffic and throughout the local communities where the service is delivered. The job requires responsibility, precision, physical fitness, a service-minded attitude and the ability to work efficiently and safely — every day, from start to finish.

At NordRen, the working environment should be characterised by respect, safety and clear procedures. We work systematically with HSE, training and preventive risk-reduction measures. Our employees should have safe and well-organised working conditions and feel that the work they do is both seen and valued. NordRen is, of course, a company covered by a collective bargaining agreement.

Working in waste collection is practical, physical and

meaningful. It offers a high degree of independence and responsibility, varied working days and the opportunity to make a visible difference for both residents and the environment. For us, recruitment is about more than filling vacancies. It is about building a stable professional environment with proud employees who recognise the value of the work they do. Together with our clients, we use our expertise to develop efficient, innovative and sustainable waste collection services in Norway — for people, the environment and the future.

Highlighting the role of the waste collector also means highlighting an important part of environmental work. A waste collector can empty around 400 bins in a single day. You can help by keeping the way clear so that we can empty your bins safely and efficiently.

Place your bin where it is easy to access, with the handle facing out, and remember to clear snow and grit the access area during winter — it is greatly appreciated!

Our Public-Service Mission

Waste collection is a service most people only notice when it does not work. And that is exactly how it should be.

NordRen carries out an essential public service on behalf of municipalities and inter-municipal companies. Our clients must be able to rely on the service being delivered to a high standard, on time and professionally. Residents should experience a clean, safe and predictable waste collection service.

When we are out in the streets, we represent more than NordRen. We are also the public face of the municipality. That places demands on how we behave, how we drive, how we handle service deviations and how we safeguard our employees, other road users and members of the public.

Authorities increasingly expect companies to demonstrate transparency and to be measured on climate and environmental performance, social matters and responsible corporate governance. This forms part of the EU's green transition agenda, including the Corporate Sustainability Reporting Directive (CSRD).

These areas are expected to become subject to statutory reporting requirements. NordRen has therefore developed its ESG strategy — Environmental, Social and Governance — and already reports internally on these areas.

NordRen has chosen to focus particularly on four of the UN Sustainable Development Goals: Good Health and Well-Being, Gender Equality, Decent Work and Economic Growth, and Climate Action.

These are areas to which we, as a responsible member of society, pay particular attention.

The municipality promises the service. NordRen delivers it.

EN KOMPLETT LØSNING FOR ELEKTRISK LASTEBILDRIFT

Det handler om mer enn bare å kjøpe en elektrisk lastebil. Du får en løsning som er tilpasset hvordan du faktisk jobber i hverdagen. Bærekraftige transportløsninger kan også være nøkkelen til nye forretningsmuligheter og partnerskap.

Grunnlaget for de beste løsningene er alltid kunnskap, derfor tar vi utgangspunkt i hvordan du bruker bilen i dag. Vi analyserer data fra driften din og finner ut hva du faktisk trenger. Målet er å finne en løsning som fungerer ute på veien, der du tjener pengene dine.

Selve lastebilen kan bygges på flere måter, med ulike chassis, akselkombinasjoner, e-maskiner og førerhus.

Du får også forskjellige batteripakker å velge mellom. Poenget er enkelt: Du skal ha rekkevidde og kapasitet som passer jobben din. Det gjør det enklere å optimalisere lønnsomheten.

Vi analyserer også hvordan du bruker bilen i løpet av dagen, derfor kan vi hjelpe deg med lading. Sammen med samarbeidspartnerne våre kan vi levere hele ladeløsningen, ferdig tilpasset deg og driften din.

Med serviceavtaler som er laget for å holde kostnadene nede og bilen i gang blir verden forutsigbar. Færre stopp og mer kjøring – rett og slett.

Skann koden hvis du vil vite mer om hvordan Scania kan hjelpe deg med din elektriske transportløsning.

SCANIA

From Waste To Resource

The Circular Economy Starts With The Waste Collector.

In a circular economy, resources should be used efficiently and kept in circulation for as long as possible. Products and materials should, wherever possible, be given a new life rather than being lost through a traditional take-make-dispose model — Reduce – Reuse – Recycle.

For that to happen, the waste first has to be collected. Once residents have sorted their waste, its journey through the circular economy begins.

The waste collector's work provides the foundation that allows waste to move on to recycling and recovery. The result may be raw materials for new products, biogas, soil improvement products or energy.

Most of our waste collection vehicles run on biogas, produced in part from food waste. In that sense, you could say that the food waste you sort helps take us to the next household and the next bin.

A single banana peel can provide enough biogas to take us almost 100 metres, and each of us throws away around 85 kg of food waste every year. That adds up to many climate-neutral kilometres.

Environmental action in practice!

When waste is collected safely and efficiently, the value chain keeps moving. When routes work as planned, bins are emptied on time and transport is carried out in an environmentally responsible way, the foundation is created for more efficient use of resources.

NordRen and its waste collectors are on the front line of an industry that plays a vital role in environmental protection. Every day, our colleagues carry out the practical work that makes the circular economy possible — in the streets, at people's homes and on the journey onwards towards recycling and recovery.

A Reliable Provider With Proven Quality

Municipalities need a waste collection partner that delivers reliably, predictably and in accordance with the agreement. NordRen aims to be a provider that its clients can rely on.

Quality has to mean more than good intentions. It requires expertise, systems, procedures and continuous improvement. We take a structured approach to quality management, environmental management and occupational health and safety — resulting in safe and efficient operations.

NordRen is certified to ISO 9001, ISO 14001 and ISO 45001. These certifications document our systematic work with quality, the environment and occupational health and safety, giving our clients confidence that services are carried out according to clear requirements and established systems.

Our ESG strategy demonstrates how we continue to develop our work in the areas of the environment, social responsibility and business ethics.

Unforeseen events can negatively affect operations. As a provider of essential public services, we therefore need robust contingency arrangements and effective crisis-management plans.

We have the necessary expertise, the plans are in place, and we regularly practise crisis scenarios. The COVID-19 pandemic from 2020 to 2022 demonstrated, among other things, that we were well prepared. Not a single bin was left unemptied throughout this highly demanding period.

What Municipalities Can Expect From NordRen:

Reliable services

Documented quality

Documented environmental responsibility

Expertise and experience

Transparency and collaboration

Development and improvement

✓ Fornybar energiproduksjon

✓ Energisikkerhet

✓ Bærekraftig Landbruk

✓ Sirkulær Avfallsbehandling

✓ Prisforutsigbarhet

✓ Langsiktigesamfunnseffekter

Let's Not Waste Potential!

Redo Biosolutions er en ledende nordisk produsent og distributør av biometan, biodrivstoff og biogjødsel. Vi leverer bærekraftige energiløsninger til transport, prosessindustri og landbruk. Vi omdanner organisk avfall til ren energi og næringsstoffer, og følger prinsippene reduser, gjenbruk og resirkuler for å maksimere ressursutnyttelse.

Dette er Redo Sirkularitet i praksis.

We know the area, the people and the task.

Good dialogue with the municipality, combined with skilled employees and a strong focus on operational quality, creates a service that works well.

We achieve the best results together.

Jan Carl Nyfløt / Department Manager

Töm rätt med Kärlkontroll

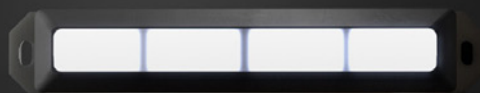

Ett feltömt kärl kontaminerar hela lasten – speciellt i flerfacksfordon. Vår nya teknologi varnar chauffören om fel kärl hänger på lyften. Med Botek Kärlkontroll blir det lätt att göra rätt och svårt att tömma fel kärl.

Tekniken integreras med digitala ruttprogram som EDP Mobile och Evolution Collector.

Boteks dynamiska vågar och programvara förenklar avfallshanteringen. Scanna eller läs mer på botek.se

WEIGHING FOR VALUE

The Team Behind The Service

Good waste collection is about more than vehicles and collection routes. Behind the waste collectors and the daily collection service is a broad professional team working every day to ensure quality and efficiency throughout our operations.

Our specialist functions — operations, technical services, logistics, HR, payroll, quality and environment, IT and finance — have different responsibilities but one shared goal: to create the right conditions for reliable deliveries and high-quality services for municipalities and residents. Through planning, follow-up, skills development, quality

management, digital solutions and maintenance, our support functions ensure that waste collectors have the best possible conditions for carrying out their work.

At the same time, they contribute to continuous improvement, efficient use of resources and compliance with requirements from clients and authorities.

The interaction between our specialist teams and day-to-day operations is an important part of our strength. When challenges arise, they are handled by people with experience, expertise and a shared commitment to finding good solutions.

That gives our clients confidence — and helps ensure that a service that simply has to work, does.

Do you want a job that makes a difference – every day?
Then NordRen might be the place for you.

Helping Shape Tomorrow's Waste Collection

The future of waste collection is about more than new vehicles and new technology. It is about developing better solutions for everyday operations — together with clients, employees, suppliers and partners.

NordRen aims to be professional, efficient and, not least, adaptable. We continuously work to improve logistics, reduce our environmental impact and develop collection solutions that work well in practice.

Our vehicles account for our greatest climate impact. That is why fuel choices, route planning and route reviews, maintenance and investment in new equipment are important parts of our environmental work.

When purchasing new equipment, we aim to choose zero-emission or climate-neutral solutions.

Good maintenance is also part of sustainability. Taking proper care of our vehicles extends their service life, improves operational reliability and makes better use of resources.

At the same time, the future of waste collection depends on the people who do the job. Technology can support their work, but it is the experience, expertise and sense of responsibility of our waste collectors that make the service work as intended.

NordRen is helping shape tomorrow's waste collection — through better solutions, safe operations and a clear ambition to contribute to a more circular economy.
